

# Renal and Hepatic Impairment Studies

Dr. Vince Clinical Research (DVCR) specializes in evaluating the effects of renal and hepatic impairments on drug pharmacokinetics (PK) and pharmacodynamics (PD). These studies are essential for understanding how organ impairments influence drug metabolism and excretion, enabling the development of safe and effective dosing regimens for affected patient populations.

## DVCR's Model for Organ Impairment Studies

DVCR has developed a site-centric model for organ impairment studies that blends expertise and collaboration, ensuring that each study is executed with precision and efficiency.

### Strategic Site Partnerships

DVCR collaborates with a network of proven sites, fostering strong relationships to ensure study prioritization and engagement

### Patient Access & Expert Oversight

Our sites are guided by Subject Matter Experts and provide access to necessary patient populations

### Proactive Communication & Governance

We establish clear governance charters and communication to mitigate delays and maintain study momentum

### Expedited Site Payments

Accelerated payments ensure site engagement and reduce the risk of study delays

### Experienced Project Management

Seasoned project managers deliver timely and efficient project oversight and ensure successful study execution from start to finish

### Comprehensive CRO Services

DVCR offers full-spectrum CRO services, ensuring seamless study processes and high-quality data

## Site Network for Organ Impairment Studies

Dr. Vince Clinical Research partners with highly regarded and experienced sites to ensure high-quality study outcomes

---

### Renal Impairment

- 130+ PK renal impairment studies over the past five years - conducted by sites
  - 350+ beds for overnight confinement
  - Access to patients with mild to severe renal impairment, including those with End Stage Renal Disease (ESRD) on hemodialysis
- 

### Hepatic Impairment

- 150+ hepatic impairment studies completed in the last five years – conducted by sites
- 300+ beds for overnight confinement
- Patient access ranging from mild to severe hepatic impairment and healthy controls

## CRO Support Services

Multi-Site Trials

Project Management

Data Management

Biostatistics

Medical Writing

PK/PD Analysis

Medical Monitoring

Clinical Monitoring
